

WATER BOWSERS

Our 6-8mm thick moulded polyethylene tanks are designed for strength and durability. With a wide choice of fittings to meet your specific requirements, they can be mounted on a frame, a skid, or a chassis for site or highway towing - these are galvanised to prevent rust. The design is such that it protects the taps and lights from damage and includes a lockable hatch lid protecting contents.

On Demand Water Supply

This range of pumps, fitted to one of the Water Bowser range, combines to make an excellent product for many applications requiring a pressurised water supply, such as temporary office cabins, accommodation blocks, etc.

Poly Drinking Water Tanks

An innovative, space saving, drinking water storage solution for providing drinking water at public shows, events and in emergency situations. Manufactured from Regulation 31 approved material and listed in the Secretary of State's List of Approved Products, these can be used in public water supplies
